

APPLICATION ENGINEER FOR MODEL-DRIVEN DEVELOPMENT

Sofismo specializes in the innovative use of formal modelling. Customers rely on our fairness and our daring to innovate, employees rely on our mutual respect and our love of continuous education.

You develop software in customer projects. You learn to use model-driven approaches and strengthen your tool know-how. Together with our team of international experts you meet and work with a great diversity of customers.

Technical skill set:

- Excellent ability to identify abstractions
- 2-3 years of project experience with object-oriented programming in J2EE/EJB
- First experience with model-driven methodologies (MDA, MDD and/or DSM)
- Experience in UML, Use Case Modeling and Design Patterns
- Experience with Eclipse

Social skills:

- Analytical and balanced personality
- Dynamic, communicative and independent
- Willing to learn and team-oriented
- Persevering and practical
- Decisive and independent
- Friendly in social interactions

You strive for excellence and innovation!
